**EOTec 2000**

**2D46 Optical Interface Module**

The 2D46 Optical Interface Module connects the EOTec 2000 modem with the fiber cable network allowing the optical signals to be transmitted to and received from another fiber optic modem. The 2D46 has the added benefit of supplying a 4 to 20mA output that is proportional to the optical power received from the remote location. This output can be used to diagnose fiber degradations before they become a "loss of signal" problem.

Two optical modules can be used in one modem to form an optical repeater or configure an Optical Daisy Chain. Up to five optical modules can be cascaded to form an optical Star network. Two optical modules combined with a Self-Healing Ring module provide optical media Redundancy in critical applications. A maximum combination of five optical or electrical modules may be connected together in one modem, inter-module communications and operating power is achieved through the integrated module interconnections.

**SPECIFICATIONS**

**Mechanical:**
- Mounting: 35mm DIN Rail
- Weight: < 9oz (250g)

**Optical:**
- Wavelength: 1300nm, Single-Mode
- Port Connection: ST* Compatible
- Dynamic Range: 16dB utilizing 9/125 Fiber
- Transmit Indicator: Green LED
- Receive Indicator: Amber LED
- 4 to 20mA Diagnostic Output: Internally powered, proportional to the received optical power, Output less than 4mA indicates loss of optical signal
  - Connection: Pluggable screw terminal block at the bottom front of the unit, Cage-clamp connectors accept wire sizes 12 to 24 AWG

**Ambient Conditions:**
- Operational: -40°C to 85°C
- Humidity: 0 to 95% Relative Humidity, Non-Condensing

**Notice:** This model is not recommended for use with the ControlNet protocol.
